

**STELLAR**  
**ROAD RANGER™** 1302 Elite

State of the art componentry and extensive field research have come together in Stellar's new 1302 Elite; the ideal, multi-functional tire service truck capable of meeting any size commercial tire dealer's needs.

This unique 13' aluminum body centers around an advanced use of design and materials. With a standard body weight of approximately 1000 pounds, maximized payload and better fuel economy are easily realized. The 43" high x 96" wide body is designed to hold 3 rows of 8 standard truck tires. With the addition of 29" high rack extensions, you more than double the 1302 Elite's tire hauling capacity. The 1302 Elite's sub-structure is based around the industry proven extruded aluminum plank floor, designed to be stronger, more durable, and last longer than a flat sheet of deck plate floors commonly found on most tire service bodies.

Twenty-six-inch wide front vertical compartments with box extensions are standard. The available SHD-66DD direct drive hydraulic or the SGD-2040 gas powered air compressor is located top center in the truck bed. Here the compressor is protected from the elements, is easier to maintain and service, and provides for a better balanced truck.

Stellar's EDL-16-86 1600-pound all-hydraulic liftgate with a galvanized grip-strut platform and folding rail tire stop is optional. Top mounted brake, turn, and marker lights are used for greater visibility and safety and are standard equipment.

The curb-side front vertical cabinet has standard 3/8" x 50' and 1/2" x 50' hose reels along with an air filter and regulator mounted to the top of the compartment for ease of accessibility. Options include a 2-drawer cabinet with a 15-pin socket rack and compartment lights.

# STELLAR ROAD RANGER™ 1302 Elite

The 1302 Elite is shown here with standard rack sides. The 1302 is also available with 29" racks for more hauling capability.

Also included are rounded automotive style wheel wells with standard halogen low level built-in flood light on both left and right sides.

Fold back door design for unobstructed access to tool storage compartment. Standard features are the rear body tool compartments with side top doors.

A 26" vertical cabinet as shown from the driver's side. Note the four large adjustable shelves and the heavy duty reinforced door design with stainless steel hinges. All door hardware is bolted on with stainless steel bolts and lock nuts. The optional road service strobe light is located on the compartment top.

All of the tool compartments feature the black, powder coated compression style T-handle with tamper resistant locking mechanism.

SGH-2040 gas driven air compressor has a 20 HP gas engine w/electric start. Industrial 2-stage 4-cylinder air compressor (40 CFM at 175 PSI) mounted on top of dual air tanks. The compressor is located between the front vertical cabinets for protection from the elements, ease of service and maintenance.

Fold back door design allows for full access to the lower mounted jack box / storage compartments that are standard on the 1302 Elite.

Shown with the available sill guard protectors on the bottom of the tool compartments.
